## **INTRODUCTION**

The project E-Commerce website is all about to delivery of essential things for people like **vegetables-fruits and medicine.** This home delivery website is very useful for those people who can't able to go and take it. In this website we use several navigation for which people can easily go to the particular menu and search the things. This website can also help us to return the items by sharing the review and picture also. We provide all the medicine for diseases and fresh fruits and vegetables. This website manages all the information about stocks of these items.

## **EXISTING SYSTEM**

### **This project has certain functions**

#### **a)Home Page →**

This is the main page of the website in which we describe about our things (fruits-vegetable and medicines).

#### **b)Sign-up→**

If someone want to get the product so firstly they have to sign-up before order the items. They can't order fruit-vegetables and medicines before the sign-up

#### **c>Login→**

If someone already sign-up yourself then they can use the login credential for order the items without login you cannot order the Items.

## **USE OF THE PROJECT**

The purpose of the project is to build an application program to reduce the manual work for managing the fruits- vegetables and medicines. This website is very useful for people because we take care about the defective items for which people can not suffer any problem. There are some places where market and shops are not nearby , so in that case people can use this E-Commerce website for delivery of their necessary items.

## **FEASIBILITY OF THE PROJECT**

It is feasible for Laptop and android having a proper internet connection

# **FUNCTIONAL SPECIFICATION**

## **This project has certain functions**

### **a)Home Page →**

This is the main page of the website in which we describe about our things (fruits-vegetable and medicines).

### **b)Sign-up→**

If someone want to get the product so firstly they have to sign-up before order the items. They can't order fruit-vegetables and medicines before the sign-up

### **c>Login→**

If someone already sign-up yourself then they can use the login credential for order the items without login you cannot order the items.

## **SOFTWARE SPECIFICATION:**

- Technology Implemented : Web Development
- Language Used : HTML,CSS, PHP
- Database : MySQL
- User Interface Design : Login, Signup page
- Web Browser : Google Chrome

## **HARDWARE REQUIREMENTS:**

- Processor : AMD Ryzen5
- Operating System : Windows 10
- RAM : 8GB
- Hardware Devices : Laptop
- Display : 15.6 inches

## **FUTURE SCOPE:**

The future scope of this project is that it will work as an information provider and the user can also get delivery because till now half of the population is not having proper information the medicines. We can add other items also as per the customer requirements. Production and marketing of fruits and vegetables and medicines must deliver into production aspects, marketing, aspects, processing and manufacturing aspects. There is tremendous production of fruits and vegetables in a shorter period. Therefore, to avoid the post-harvest loss and to increase substantial returns to processors for off season consumption .
